

14. Dresdner Sensor-Symposium (December 2-4, 2019)

The “Dresdner Sensor Symposium” is held every two years in Dresden. It is a three-day conference covering all topics of sensor technology, whereby traditionally chemical sensors are particularly strongly represented. This was also the case this year. The Department of Functional Materials gave five contributions. This included own contributions as well as work resulting from collaborations with colleagues from other universities or with industry. The Department of Functional Materials has been regularly present at the Dresden Sensor Symposium since 2005.

Left: Julia Wohlrab (Department of Functional Materials) after her oral presentation.

Right: Anastasiya Ruchets (Kurt-Schwabe-Institut für Mess- und Sensortechnik, Meinsberg (KSI), a collaboration partner of the Department of Functional Materials, during her talk.

Participants of the 14. Dresdner Sensor-Symposium from the Department of Functional Materials: Julia Wohlrab, Dr. Daniela Schönauer-Kamin, Ricarda Wagner, Nils Donker and Prof. Ralf Moos.
